

Concealed SKYscreen Trim Kit

Following on from the success of the Concealed SKYscreen there has been an increasing demand for trim systems to make the sale complete and resolve all the installation issues. The wood system has surged forward and gives a high quality solution for this end of the market. However the Aluminium option has had a more difficult time with a high cost and poor record of delivery.

Oceanair has resolved this by designing its own integrated solution that mounts within our Concealed SKYscreen unit. Apart from being a bespoke solution, delivery can now be made in the same delivery time as the Concealed SKYscreen unit

There are two products – Lower Trim and Upper Trim.

Lower Trim

- Aluminium extrusion with injection moulded corners.
- Its modular design allows the various sizes required coupled with two radius corners – 43 mm and 50 mm.
- Available in two colours - White 9016 or Beige 9001 as per the handle colours.
- The Trim clips firmly to the CSS unit and is removed by unclipping the corner secret fastener.
- The unit would be shipped with the liner fitted.

Upper Trim

- The upper trim is a particularly cost effective solution and is aimed at higher volume users
- Formed using our 62mm or 118mm PVC line fitted on installation into an aluminium subframe which is held in place when the Concealed SKYscreen unit is assembled.
- The liner is joined using our current joining strip
- Liner colour is off white – RAL 9010
- The trim frame incorporates the radius inserts (used in Surface SKYscreen which match the lower trim radii and those of the hatch.
- The liner would be supplied loose to be fitted by the customer.

It is not essential to use the Upper and Lower Trim together, and both can be matched with other solutions.

It is also possible to supply the lower trim without handle cut outs to use as a hatch finishing ring.

Can be used with Powered Concealed SKYscreen.
